PROFILE

A software engineering graduate with 1.5 years experience working as a full web developer. Worked for 7 months as an intern, working mostly on front end development, working with CSS, HTML, JavaScript and APIs. Later worked as a freelancer, developing full stack applications using LAMP Stack for small to medium sized businesses. Currently looking to work on larger more complex projects that will help me grow and improve my skills as a developer and entrepreneur. Interested in learning and using other modern development technologies for future projects, such as MERN Stack and other related frameworks.

WORK EXPERIENCE

WEB DEVELOPER | Jul 2021 - Present

Sustainable Living | New Dehli, India

Worked for sustainable Living as an intern for 7 months. Primarily worked as front end developer, then later got assigned the task of being the lead intern developer. My task consisted of assigning to other interns and the reviewing it before approval. I worked on at least 3 websites while at Sustainable Living, making use of HTML, CSS, and JavaScript, as well as some Google APIs.

WEB DEVELOPER | Jan 2022 - Present

Freelancing | Maseru, Lesotho

Worked as a freelance developer in my own country, where I developed 3 full stack applications using LAMP and MERN Stacks. Developed an inventory management application using LAMP Stack for a business that sold cleaning products, which helped in the significant reduction of costs due to mismanagement of stock and the theft of stock. Developed an e-commerce application for a local shoe retailer using MERN Stack, which helped them reach a wider audience and make easier deliveries.

EDUCATION

BACHELOR OF SCIENCE

Botho University | Maseru, Lesotho

Completed a bachelor of science degree in software engineering at Botho University and learned a wide range of programming languages while developing modern web, mobile and desktop applications. Some of the languages learned include PHP, Java, C++, C# and JavaScript.

SKILLS

PROFESSIONAL

- **Leadership:** Obtained leadership skills while working at Sustainable Living
- **Accountability:** Learned to be accountable for both my work and the work of others.
- **Time Management:** Working remotely meant I had to work with different time zones and as a result, had to respect and manage time for optimal performance.

TECHNICAL

- **RDBM:** Can use Relational Database Management technologies such as MySQL and Microsoft SQL Server.
- **Version Control:** Can use version control software such as Git and GitHub.
- **OOP Concepts:** Can create program and applications using Object Oriented Programming concepts.
- **System Administration:** Can do basic system administration tasks on both Windows and Linux Operating Systems.
- **SDLC & Software Engineer Principles:** Fully aware of software development life cycle process and implementing the necessary software engineering principles and concepts

PROJECTS/ACCOMPLISHMENTS

ACADEMIC

- Received several Dean's Awards of academic excellence.

PROFESSIONAL

- Developed an Inventory Management Application that helped reduce a business' costs and theft rates by monitoring stock input and output. Available at <https://www.lesga.co.ls>
- Made an ecommerce website for a local retailer, which lead to a significant growth in their business as they could reach and deliver to a wider market. Available at <https://www.vintaexpress.co.za> (Currently under construction)
- Developed several static yet responsive websites for several businesses while working as an intern.
